

P-102 Overpressure Assessment Approval Note

Document Control

- This approval note for the P-102 overpressure assessment is based on the evidence and guidelines provided, and is subject to the policies and procedures outlined in the relevant documentation.

Subject

- The subject of this assessment is the P-102 overpressure evaluation, which is an AF-450C centrifugal process pump installed in 2018 for CDU-4 crude transfer.

Background

- The assessment is conducted to ensure the pump operates within its approved maximum operating pressure of 40 bar, with a normal operating pressure of 35 bar, to prevent overpressure conditions that could lead to equipment failure or safety incidents.

Evidence

- The evidence includes the pump's detailed datasheet, which specifies the manufacturer, model, capacity, and pressure ratings, as well as the assessment guidelines and policies.

Technical Assessment

- The assessment involves reviewing the output, which includes evidence, assessment, uncertainty, recommendation, and approval requirements, to ensure the pump operates safely within its design parameters.

Risk

- The risk assessment focuses on the potential for overpressure, which could lead to equipment failure, and the need for appropriate safety measures and controls.

Recommendation

- The recommendation is to approve the assessment, ensuring the pump operates within its approved maximum operating pressure, and to implement any necessary follow-up actions.

Approval Requested

- Approval is required to ensure the assessment meets the necessary standards and to proceed with any recommended actions.

References

- The assessment is based on the guidelines provided in APEL-SOP-ENG-241, APEL-MAN-302, APEL-SEC-101, APEL-AI-104, APEL-SOP-MNT-211, APEL-AS-P102-002, APEL-DRG-P102-010, and APEL-DOC-105.

AI Provenance

- The AI output is labeled as generated content and is subject to human oversight, with high-risk recommendations entering an approval queue for final decision-making.
